

Child Profiling Tool

Identify potential problems earlier to improve children's outcomes

Capita One provides a single, holistic view of a child's situation, drawing on data already recorded such as special educational needs, those receiving free school meals, children not achieving their expected level of attainment and those with poor attendance in school.

Using this information the Child Profiling Tool assigns a weighting score for different types of information, based on the authority's requirements. All of these scores are calculated and a single risk score is generated and recorded for children that have been identified. This allows vulnerable children to be grouped and ranked to identify those most at risk. With the ability to set up regular monitoring reports your teams can be alerted to any positive or negative fluctuations and respond as necessary.

Capita One allows the impact of interventions and support to be easily monitored, improving the effective use of resources and maximising Payment by Results funding.

Key Benefits

- **Improve outcomes:** through early identification children receive the help and support they need, resulting in improved outcomes.
- **Save time and money:** more effective data sharing between multi-agency teams allows you to target resources where they are most needed.
- **Flexible:** easily configured to meet your local needs including monitoring children from troubled families, predicting NEETs and impact of Raising of the Participation Age.
