The insight you need for informed decision-making

There's never been a more important time to understand the exact needs of children and families in your local area. With increasing budgetary pressures and a growing demand for services, it's only with the complete picture that you can accurately assess the impact and effectiveness of the support you're providing.

One Analytics provides teams and individuals in all roles with the information needed to make evidence-based decisions across your education, early years, youth and social care data in One.

World-leading intuitive analysis tools, powered by Tableau®, allow you to explore trends to identify those most in need, monitor service delivery, and understand the root causes so that interventions can have the maximum impact.

Our partnership with the Early Intervention Foundation helps promote best practice in effective early help strategies, including understanding the impact of interventions on children and families.

EARLY INTERVENTION FOUNDATION

Create dashboards that provide managers at all levels with the information they need:

- Set up personalised dashboards that provide all the critical data, at a glance
- Explore your data to understand underlying trends - using filters and drill downs
- Monitor the performance of vulnerable groups by filtering reports to see just these children
- Use maps to identify geographical trends

- Identify the individual children who need additional support
- Compare with national data sets, such as the indices of multiple deprivation
- Share appropriate data with schools, academies and multi-agency partners.

All student and regional data is for illustrative purposes only and is entirely fictitious

Why choose One Analytics?

Identify those most in need of targeted services

Easily compare the performance and progression of vulnerable groups with other cohorts to spot trends and identify children at risk. With instant access to information about your looked-after children you can identify inequalities and monitor the impact of supportive strategies.

Teams have the information they need to make a real difference

With information at their fingertips and personalised dashboards, all teams can ensure that no child is overlooked and resources are focused on the services and interventions that deliver the most impact, reducing future demand for services.

Intuitive tools so performance teams can focus on supporting intelligent analysis

User-friendly drag-and-drop features allow report writers and service users to easily create, customise and update visually-engaging reports, heat maps and interactive dashboards. This frees up their time to analyse and investigate trends and root causes, rather than spend time collating data.

Make informed decisions about commissioned services

Our data discovery tools enable you to review historical trends and identify the delivery areas most suited for commissioned services. Dashboards enable the performance of providers to be monitored, and for you to share appropriate performance information with providers.

Support multi-agency working for more effective interventions

Enable multi-agency teams, academies and schools to access appropriate information so they can support more targeted interventions. This allows these teams to understand the wider contextual information about the child and family they're working with, ensuring interventions meet their exact needs.

Improve service delivery and increase efficiency

Monitor current service delivery and compare year-on-year performance as well as differences between service teams. Identify best practice which can be celebrated and shared across your organisation.

Enable report writers to quickly create reports and dashboards:

Capita One's data model makes it easy to identify the fields you need.

Report writers can create reports with vastly greater efficiency using Tableau's powerful business intelligence toolset.

Empower users with self-service reporting and data discovery.

Easily create heat maps using Tableau's tools.

All student and regional data is for illustrative purposes only and is entirely fictitious

Frequently asked questions

Is One Analytics accessible from mobile devices?

One Analytics, including the business intelligence toolset powered by Tableau®, is accessible from laptops, PCs and mobile devices such as tablets and, with user-friendly self-service reporting, empowers teams to find their own information instantly and easily.

What modules can be reported on from One Analytics?

We plan for One Analytics to support all modules including Youth, eStart and One Social Care by the end of 2016. In our first release in Spring 2016, Attendance, Attainment, Admissions and Transfers, Children's Support Services, Exclusions, SEND and eStart will be supported.

What technical requirements do we need to run the analysis tools?

One Analytics is a powerful reporting product which uses a data warehouse and is powered by Tableau's world leading business intelligence toolset. It is possible that you will need additional server(s) to support this product. Further details can be provided by your business development manager.

What are the module prerequisites?

One Analytics enables you to report on all the modules you are licensed for. To use the import tool you need a Pulse license. One Analytics is at the heart of our future reporting strategy and will be a prerequisite for our upcoming One Predict and Prevent module. There are also infrastructure requirements for One Analytics - for further information on these and any other aspects of One Analytics please contact the One team.

Service directors and managers

Engaging, interactive and flexible dashboards allow you to monitor the effectiveness of services and identify areas where efficiency could be improved so you can ensure the best use of limited resources. By providing your teams with access to the specific information they need, when they need it, you can promote a culture of evidence based decision making within your department, empowering your staff to make the best decisions for children and young people in your local authority.

Service delivery teams

With the full picture, and the ability to analyse and filter by vulnerable groups, geographical areas, ethnicity, age, gender and religion, teams can ensure no child is overlooked. Teams are able to easily spot trends and identify characteristics of potential increased vulnerability.

Multiple agencies and departments can identify and share areas of best practice, ensuring service delivery and efficiency is continuously improved.

Performance analysts and report writers

One Analytics provides intuitive business intelligence tools, enabling reporting teams to quickly and efficiently create visualisations and dashboards through a drag-and-drop interface.

Because One Analytics draws on the data already held in One by your local authority, performance analysts are free to focus on analysing and investigating trends and root causes, rather than spending their time collating data.
