

One Assets Compliance Manager

Easily manage your key
compliance activities

Compliance and risk management are more important and taking a higher profile than ever before. One Assets Compliance Manager allows you to see the big picture instantly and manage your compliance processes more easily.

With the new Compliance Manager module you have access to predefined dashboards, utilising One InSight and Microsoft Power BI, covering the six-key compliance areas - fire, lifts, electrical, asbestos, gas and Legionella / water management.

The module allows you to track your overall compliance performance and explore a variety of interactive visualisations at a glance or delve into specific areas to see tasks that are 'current', 'due' or 'overdue'.

Operatives and officers can highlight risks and hazards, and quickly and easily schedule them to be completed. Once these are closed in One Assets they will automatically close the hazard in the Compliance Manager module.

Automation of daily, weekly, monthly or yearly compliance scheduling allows you to create templates for your compliance areas, based on the tasks required and their pattern of recurrence. These only need to be set up once, which saves time by reducing repetition, and an Outlook-style compliance calendar provides daily, weekly, monthly and list views of your compliance tasks.

The module also features assessment surveys, using customisable question and answer sets, to offer increased flexibility to define and record compliance inspections and visits. You also have the option to trigger hazard management outcomes automatically.

Organisations can also now uniquely identify and manage hazards identified as part of the compliance assessment, monitoring follow-on actions with integration to other OPEN modules, such as Repairs, CRM, Workflow, ASB and Contact Management. This integration enables smooth and seamless management, along with comprehensive reporting and analytics.

Key benefits

- ✓ Saves time with automated daily, weekly, monthly or yearly compliance scheduling
- ✓ Improves organisation and vision of workload with the Outlook-style compliance calendar
- ✓ Greater flexibility to define and record surveys and generate actions
- ✓ Unparalleled integration to other OPEN modules, such as Repairs, CRM, Workflow, ASB and Contact Management
- ✓ Improved visualization with interactive dashboards to track performance and highlight areas of concern.
